Data Engineer | *ETL/ELT and Streaming* | *Databricks, Snowflake, Spark* | *Data Modeling* | *AWS, Azure, GCP*

Microsoft Certified: Azure Data Engineer Associate (DP-203) | **Databricks Certified Data Engineer Associate**

PROFESSIONAL SUMMARY

Data Engineer with 5+ years designing, building, and operating production batch and real-time data pipelines, lakehouses, and data warehouses across financial services, pharmaceutical, and IT services at 2+ TB per day. Expert in SQL and Python with PySpark, Scala, Databricks, Delta Lake, Snowflake (Warehouses, RBAC, Key-Pair Auth), Amazon Redshift, Azure Synapse, and BigQuery, orchestrated with Apache Airflow, dbt, and Azure Data Factory. Builds streaming ingestion with Apache Kafka, Azure Event Hubs, and Spark Structured Streaming, cutting a key pipeline from 4 hours to 75 minutes. Designs dimensional models, star schemas, and medallion architectures, and owns data quality, validation, monitoring, lineage, and governance with Unity Catalog and RBAC, reaching 98% pipeline success across 15+ production pipelines. Ships with Git, GitHub Actions, Terraform, and Docker, tunes performance and cost, and partners with analysts, data scientists, and business teams, including AI/ML and RAG data pipelines.

TECHNICAL SKILLS

Languages: SQL (Window Functions, CTEs), Python (Pandas, Pytest), PySpark, Scala, Spark SQL, T-SQL, Bash

Data Platforms and Warehouses: Databricks, Delta Lake, Snowflake, Amazon Redshift, Azure Synapse, Google BigQuery, Unity Catalog, Lakehouse

Orchestration and Transformation: Apache Airflow, dbt Core and dbt Cloud (Models, Tests, Snapshots, Docs), Airbyte, Azure Data Factory, AWS Glue, Databricks Workflows, Fivetran

Streaming and CDC: Change Data Capture (CDC), Debezium, Apache Kafka, Spark Structured Streaming, Azure Event Hubs, IoT Hub, Event-Driven Pipelines, Replay-Safe and Idempotent Processing, Restart Recovery

Cloud: AWS (S3, Lambda, Glue, EMR, Redshift, RDS, CloudWatch, IAM), Azure (ADLS Gen2, Data Factory, Synapse, Azure SQL, Monitor), GCP (BigQuery, Cloud Storage)

Data Modeling: Dimensional Modeling (Kimball), Star Schema, Fact and Dimension Tables, Slowly Changing Dimensions (SCD Type 2), Incremental Models, Data Marts, ODS, Medallion Architecture

Data Quality and Governance: Validation, Deduplication, Reconciliation, dbt Tests, Schema Checks, Monitoring and Alerting, Data Lineage, RBAC, Audit Logging, HIPAA-Aligned Controls

Performance and Cost: Partitioning, Partition Pruning, Caching, Z-Ordering, Incremental Loads, Query Tuning, Compute Right-Sizing

Databases: PostgreSQL, Microsoft SQL Server, MySQL, Azure SQL, MongoDB

DevOps and Tools: Git, GitHub Actions, CI/CD, Terraform, Docker, Kubernetes, Databricks Asset Bundles, Azure DevOps, Jenkins, Jira, Agile

BI and AI: Power BI, Tableau, RAG, Vector Embeddings, OpenAI Services, AI Coding Assistants

WORK EXPERIENCE

Data Engineer | **Intuit** May 2025 to Present

- Architected scalable ETL/ELT pipelines with Python, PySpark, Scala, SQL, Databricks, and Delta Lake on Amazon S3, taking financial data from source systems to analytics-ready tables at 2+ TB per day.
- Rebuilt a slow overnight batch job as a real-time pipeline streaming Apache Kafka events through Spark Structured Streaming into Delta Lake, cutting processing from 4 hours to 75 minutes so finance teams work with near real-time data.
- Built integrations with AWS Lambda and REST and GraphQL APIs that feed transaction and product data into the lakehouse, supporting both real-time and scheduled batch workloads.
- Led a reusable ELT framework with dbt, Apache Airflow, and Databricks Workflows across 15+ production pipelines loading Amazon Redshift, giving every new source the same tested, documented pattern.
- Owned data quality and governance for regulated financial data with validation, deduplication, Unity Catalog RBAC, audit logging, lineage, and AWS CloudWatch monitoring, raising pipeline success to 98%.
- Tuned Spark, SQL, and Amazon Redshift workloads through partition pruning, caching, file compaction, and query rewrites, reducing selected analytical runtimes by 30% and lowering compute use.
- Built CI/CD with Databricks Asset Bundles, GitHub Actions, GitLab merge request reviews, and Terraform, and tracked releases in Jira and ServiceNow, automating deployments for 15+ pipelines.
- Built ML and GenAI data pipelines with Python, SQL, Amazon S3, OpenAI services, and vector embeddings, saving 10 hours of dataset preparation per development cycle.
- Built Python and SQL reconciliation checks between source systems, the S3 data lake, and Amazon Redshift, catching missing and mismatched records before they reached finance dashboards.
- Partnered with product, finance, and analytics stakeholders on requirements, architecture reviews, and proofs of concept across AWS, Azure, and GCP, and presented findings from 2+ TB of daily data to business teams.

Associate Data Engineer | **Dr. Reddy's Laboratories** January 2022 to July 2024

- Developed batch and streaming pipelines on Azure Databricks with PySpark and Spark Structured Streaming, ingesting pharmaceutical and manufacturing data from Azure Event Hubs, IoT Hub, and SQL Server at 300+ GB per day.
- Built Azure Data Factory and Integration Runtime ingestion from 8+ on-premises and cloud sources, including Hadoop, Hive, and Azure SQL, into ADLS and Databricks, saving 10 hours per reporting cycle.

- Designed conceptual, logical, and physical data models, an ODS, and data marts in Azure Synapse and SQL Server with T-SQL, stored procedures, and dbt, standardizing definitions across 10+ reports.
- Optimized large-volume Spark and Azure Synapse processing with Scala, Spark SQL, HiveQL, partitioning, and caching, reducing selected batch runtimes by 25%.
- Replaced full reloads with incremental ETL and reusable transformation components across 12+ recurring pipelines, cutting processing time and compute cost on each run.
- Orchestrated 15+ production workflows with Apache Airflow, Azure Data Factory, and Linux Bash scripts, monitoring with Azure Monitor and resolving failures, dependencies, and retries.
- Created PySpark unit tests, integration tests, dbt tests, and validation and deduplication checks, and supported user acceptance testing, contributing to 97% pipeline success.
- Applied role-based access, data lineage, and audit-ready controls to regulated pharmaceutical data so pipelines met internal compliance and quality review requirements.
- Built Power BI-ready data marts and curated Synapse views on top of the lakehouse, giving business teams consistent, self-serve access to production and supply data.
- Deployed changes through Azure DevOps and Jenkins CI/CD with Git pull request reviews, and wrote source-to-target mappings with business analysts across 10+ integrations.

Data Analyst | **Tech Mahindra** January 2021 to December 2021

- Profiled, cleaned, and standardized structured and semi-structured client data from Azure SQL and REST APIs with Python (Pandas) and SQL, preparing 500+ GB of data per day for reporting.
- Automated recurring data preparation with SQL, Bash scripts, and Azure Data Factory, cutting about 12 hours of manual work per reporting cycle.
- Wrote complex SQL with joins, window functions, and CTEs against Microsoft SQL Server and Azure SQL to extract and transform data for client reporting.
- Built and automated Tableau and Power BI reports on dimensional SQL datasets, presenting insights to client stakeholders across 10+ recurring reports.
- Established data quality checks covering schema validation, null checks, duplicate detection, and reconciliation across 15+ recurring workflows before production reporting.
- Supported cloud migration and modernization work, translating client requirements into technical specifications and source-to-target mappings for 10+ reports.
- Worked in Agile teams with Jira, joining sprint planning and stand-ups and documenting data processes for client handover.

ACADEMIC PROJECTS

Snowflake Retail Analytics ELT Warehouse | *Snowflake, dbt Cloud, Airbyte, Terraform, GitHub Actions, SQL*

- Built an ELT warehouse ingesting 5.1 million synthetic records across five retail datasets with Airbyte, creating staging models, an incremental order fact table, and a daily store sales mart in Snowflake.
- Implemented hash-based incremental merges and SCD Type 2 customer snapshots; validated 2,088,006 unique orders and $22.42M in simulated order value through reconciliation and 40 passing dbt tests.
- Provisioned Snowflake compute, databases, schemas, service users, and RBAC with Terraform; implemented GitHub Actions pull request CI with key-pair authentication and an isolated Snowflake build environment.

Pharmaceutical Supply Chain CDC and Analytics Platform | *Python, SQL, PostgreSQL, Debezium, Kafka, dbt, Apache Airflow, Docker, GitHub Actions*

- Built a local CDC pipeline capturing 10,590 synthetic records across five PostgreSQL tables; implemented transactional checkpoints, update/delete handling, and restart recovery, and verified replay safety by reprocessing 10,594 messages without duplicating stored records.
- Developed SCD Type 2 supplier history, incremental inventory models, and 39 passing dbt tests; automated a six-task Airflow workflow every 15 minutes with a CDC catch-up gate and retry recovery, and built supplier-performance and inventory-risk dashboards.

Azure Retail Sales and Inventory Data Pipeline | *Azure Data Factory, ADLS Gen2, Databricks, PySpark, Delta Lake, SQL, Unity Catalog, Azure Monitor*

- Built an Azure batch pipeline with four parallel Data Factory ingestion activities and a three-task Databricks job, turning 6,400 customer, product, order, and inventory records into 4 Silver and 8 Gold tables in 2 minutes 34 seconds.
- Added quality gates, business-rule quarantine, managed identity access, and an Azure Monitor failure alert, and reconciled daily, category, and state sales summaries for a dashboard covering 1,699 orders and 5,095 units sold.

Real-Time Financial Transaction Lakehouse | *Python, PySpark, Kafka, Azure Event Hubs, Databricks, Delta Lake, Unity Catalog*

- Built an end-to-end real-time transaction pipeline combining local Kafka streaming with Azure Event Hubs and Databricks, using a bronze, silver, and gold medallion design.
- Ingested 1,010 events, quarantined 51 invalid records, removed 9 duplicates, and loaded 950 clean records, with explainable rule-based risk scoring across $4.73M in simulated transaction value.

EDUCATION

Master of Science, Information Technology December 2025
University of Cincinnati | GPA: 4.0/4.0

CERTIFICATIONS

Microsoft Certified: Azure Data Engineer Associate (DP-203) | Microsoft
Databricks Certified Data Engineer Associate | Databricks
